

VENDORMART – VENDOR REGISTRATION PORTAL

OBJECTIVE:

Build a Vendor Registration Portal webpage using only HTML. The webpage should allow a business/vendor to enter registration details and should demonstrate form attributes, div sections, anchor links, images, and basic HTML form controls.

PROJECT REQUIREMENTS:

1. Header Section with VendorMart name and navigation links.
2. Introduction section with a vendor-related image.
3. Popular Product Categories section with product images.
4. Vendor Registration form divided into logical sections using fieldset and legend.
5. Use form attributes: action, method and novalidate.
6. Use input attributes: name, placeholder, required, minlength, maxlength, autofocus, value, size, readonly and disabled.
7. Use email and URL input types.
8. Use datalist with product suggestions.
9. Add Business Address using textarea.
10. Add Vendor Type using radio buttons.
11. Add Terms & Conditions checkbox and Submit/Reset buttons.

ANCHOR LINK REQUIREMENTS:

- Register → should jump to the Vendor Registration section.
- Products → should jump to the Popular Product Categories section.
- Help → should jump to the Help section.
- Back to Registration → should return to the registration section.
- Vendor Registration Guide → should open an external webpage.
- Contact Support → should use mailto: to open the user's email client.
